

Conduit fitting Bulkhead fitting

Conduit and bulkhead fittings

Your cables are bound together with Murrplastik cable protection conduits and are secured against damage and environmental impact occurring to the control cabinet of the machine.

Now it is imperative that the safety chain is inserted into the housing very carefully.

This task is easily fulfilled by Murrplastik conduit connections and fittings exactly according to your requirements.

Our extensive range includes everything from simple conduit connections with protection class IP 54 through to highly dense, tear-out proof conduit fittings of class IP 68 or IP 69K.

The compatibility of conduits, fittings and flange connections emphasises the system idea, as with all Murrplastik product ranges.

Well-thought out design and quick, simple or even tool-less assembly are the characteristics of our products.

- No loose piece that can get lost, everything is pre-assembled and ready to install.
- Integrated vibration protection in the form of a latch prevents unintended loosening of the cap nut and increase process safety during assembly and when in use.
- Burr less and edgeless inner bends enable efficient work even with 90° angled fittings.
- Simple locking mechanisms make retrofits and/or maintenance to existing systems easy.
- Connection threads made of metal and plastic fitted with metric, Pg or NPT threads, greatly increase the application of your products all over the world.

Our conduit fitting system gives you great advantages: less working time and more process safety through the use of innovative Murrplastik products

Conduit and bulkhead fittings product range

Conduit connection bulkhead fittings

90° conduit connection. The large opening allows easy insertion of pre-assembled conduits.

Page 142

m-jumbo conduit fittings

Conduit connections for large cable protection conduits NW 70 and NW 95. The cable protection conduit remains rotatable in the fitting.

Page 150

m-top conduit fitting

Protection class IP 68. The variety of types with different thread types ensures almost any use.

Page 84

m-tec conduit fitting

Protection class IP 65. A conduit fitting in various models with different thread types.

Page 110

m-fix conduit fittings

Protection class IP 54/65. m-fix is a quick-plug-in fitting. Simply stick in the conduit. That's all there is to it!
